

Cross Linking Machine Hire and Consumables

Intacs XL is a UVA collagen cross linking instrument designed with special focus on an intuitive usage, effective performance and above all, safety. Intacs XL is a UV irradiating device for performing a corneal cross-linking procedure at a wavelength at 365 nm and designed with an illumination intensity of 3.0mW/cm² with a working distance of 50mm.

Our machines are available to hire on an ad hoc basis. **Any bookings must be made at least 21 calendar days before the procedure date to ensure the machine is available** for that particular date and to also make arrangements to have the machine delivered/collected from the venue. Please check which dates are available before booking a date with the patient (s). This is to avoid any disappointment. **PLEASE BE ADVISED THAT CONTACTING US 21 DAYS PRIOR TO YOUR LIST DOES NOT GUARANTEE AVAILABILITY.**

Hire charges and order codes are as follows:

- £400 – Hire for one day **Order Code - INTACSXLHIRE**
- £300 – Hire deposit (credited upon return of the machine) **Order Code - INTACSXL Hire Deposit**

A Kestrel representative will attend the first three sessions to assist with setting up the machine, machine usage and dismantling of the machine. Our representative will stop attending procedures once he/she feels comfortable that all theatre/clinic staff are confident with using the machine.

Consumables

We have a custom fully sterile cross link pack (**Order Code - JCP0007A**) which contains everything needed for one patient for £38, this pack contains;
